

# Burn Clean Information

The practice of heating with wood is ancient, but the art of burning wood is an evolving technology. Variables to good clean wood burning include hardness of wood, length of seasoning, type of appliance and age of appliance just to name a few.

If you are a novice to wood burning, there are a number of resources to help you learn how to burn responsibly.

If you have been burning wood for years, there are still things you can learn to refine your skills. Your old car does not work like your new one. Neither does your old computer or old phone. New EPA Certified stoves burn differently, too. The resources on the Hearth, Patio and Barbecue Association (HPBA) web page are for everyone!
